How Social Media Affects Teens

The average American spends at least 30 minutes or up to 8 hours. Some exceed this rate due to the flexibility of the parents, and some are in between it due to very strict parents or parents that have limits to how long you use a screen....

Schuyler Bailar

Schuyler Bailar is an American swimmer, and the first openly transgender NCAA Division 1 swimmer. He is the first publicly documented NCAA D1 transgender man to compete as a man in any sport. He was recruited by Harvard and swam with Harvard’s Men’s Swimming and Diving team under coach Kevin Tyrrell. Bailar’s final 100-yard breaststroke time ranked him in the top 15% of all NCAA swims for the season and in the top 34% of all NCAA Division 1 swims for the season. His 100-yard breaststroke swim at the 2013 NCSA Junior National Championships qualified for the U.S. Open, the fastest national championship meet. Bailar is also a multi-year qualifier for the NCSA Jr. Nationals.

“How did you feel hen before you came out trans?”

“I was very nervous and afraid I think because my identity was going to hold me back from What I wanted to do, what I wanted to be in the world, do I wanted to do in the world so I was very scared that was one of the reasons it took me so long to come out.

“Why do you think it is important advocate and promote trans and lgbtq+ people?”

“So I think that the biggest thing is with lgbt folks is that they are being marginalized in community especially now in socially political climate there is a lot of hate speech being driven, discrimination being driven to try to essentially to drive us out especially for trans people there a lot of initiatives trying to make sure that we are allowed to essentially to be legal to be discriminated against so in my opinion it's really important fight that but then beyond that let kids who are lgbtq to have them see that we are here and that it's ok to be lgbtq.

“How can schools prevent bullying?”

“They can teach people that sometimes girls have short hair and boys have long hair, they can bring speakers like me to talk about what it means to be trans gender. Have teachers step in when someone is being bullied and having gender neutral bathrooms.

Awards and Advocating

In 2018, Bailar received several accolades: The Advocate, named him to the Pride list of Top LGBTQ activists in each state. He is a public speaker that goes to many schools to talk about his experiences and being trans.
How Social Media Affects Teens

Remember the first time you got a phone you were so excited and then you start to ask for people’s numbers and what social media’s they have so you can add them. Almost everyone has that same sensation especially when it’s comes to social media and you might spend several hours on it to keep up on posts and post stuff yourself, but did you know that the average American spends at least 30 minutes or up to 8 hours. Some exceed this rate due to the flexibility of the parents, and some are in between it due to very strict parents or parents that have limits to how long you use a screen. I’m not going to blame the parents, but they should try to limit screen access if it is more than 5 hours a day which is a little too much for a day usage.

Cyber Bullying and Popularity

Remember the first time you got a phone you were so excited and then you start to ask for people’s numbers and what social media’s they have so you can add them. Almost everyone has that same sensation especially when it’s comes to social media and you might spend several hours on it to keep up on posts and post stuff yourself, but did you know that the average American spends at least 30 minutes or up to 8 hours. Some exceed this rate due to the flexibility of the parents, and some are in between it due to very strict parents or parents that have limits to how long you use a screen. I’m not going to blame the parents, but they should try to limit screen access if it is more than 5 hours a day which is a little too much for a day usage.

Exclaimer

For example, they might not want to communicate to parents or might not turn in HW or doesn’t participate in class as much as they used to but they might not show it but they might be normal and have not experienced being harassed on social media so don’t jump to conclusion and confront someone on accident that might turn ugly. And if they are affected by social media they might not believe in there self and they might not want to try something new.

Advice and Conclusion

In conclusion social media might have a lot of cool things to do and see but it has side effects, and some are not good but we can do it ourselves without parents if we put limits to how long we use social media and our screens. You might not like it but it’s a big step into helping your future self-succeed and might make you feel just a little bit healthier even if you miss you little companion and your parents and teachers and even your doctor will appreciate it a lot because you will be a little better at screens and your parents might even give you a little more time if they think you deserve it.
Pros and Cons of Different Car Fuels

Yep, more car stuff. This one is about the differences/pros and cons of electric cars vs petrol and diesel ones. Let’s start with the differences.

**Petrol Cars**

Petrol cars are the kind of car pretty much everyone owns or knows about. They are almost limitless in terms of creative bounds, which have led to some pretty brilliant petrol cars, like the Lexus LFA, Ferrari 458 and the Lamborghini Aventador. Petrol cars have the capacity to rev incredibly high (I think 9500 rpm is the highest), but they all have one thing in common; possibly high emissions, especially from supercars like the Ferrari Enzo. Car makers have had to resort to smaller turbocharged engines to get good fuel economy, but for some, it hasn’t worked.

**Diesel Cars**

Diesel cars are almost the same, but are more complicated to engineer, as they can’t rev to 6000 rpm, and almost all (I think they must) have a single or twin turbocharger setup. This isn’t bad, and I think diesel cars are better for the environment as well. I know enthusiasts will hate me for saying this, but I think diesel hybrids or EVs are the way to go. The fuel system is also more complicated, which makes them harder to manufacture.

**Electric Cars**

Electric cars, however, are the most different. They make almost no motor sound, can rev so high without people noticing that they rev to (yes, really) 18,500 rpm. That’s as much as the pre-2014 F1 cars were pushing (and those were 2.4 litre V8s as well)! They also have no emissions from the exhaust tips (because there are none) so more people want an EV now. Some car makers even have electric supercars (Rimac C_2, Tesla Roadster 2020, etc.), which are cars that can go 200 mph or more.
**Pros**

**Petrol Pros:**
- Easy to make
- Relatively cheap

**Diesel Pros:**
- Kind of cheap
- Not very harmful to the environment

**Electric Pros:**
- No emissions
- Easy to use
- Very quiet
- Improved storage space

**Cons**

**Petrol Cons:**
- Harmful to the environment

**Diesel Cons:**
- Hard to make
- Annoying engine sound (most people don’t pay attention to this anyway)

**Electric Cons:**
- Hard to make
- Also, harmful to make
- Can be heavy
Comic

"We'll see about that"

"You'll never stop me"

The Unexpected apocalypse

An then, the apocalypse started

and just like that, he poofed away

ZOMBIES!!

BUT... He has a plan

This Carstostroly has driven the system into chaos!!

He Will Save...

DANGER

SAVING...

THE WORLD!!!
To win the game you and your opponent must take turns drawing lines. If you close the line and make a box you put your initial in the box and give yourself a point. Once the entire board is full of boxes, you count how many boxes each of you have, The person with the most points wins.
